|                              | <b>Examiner</b><br>Fred H. Mull      | <b>Art Unit</b><br>3662                |  |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 11-22-2005, 12/14/2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Drawings***

1. Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

2. The disclosure is objected to because of the following informalities:

In ¶133, line 2, "four" should be --three--.

Appropriate correction is required.

### ***Claim Objections***

3. Claims 13 and 14 are objected to because of the following informalities:

In line 6, "base" should be --based--.

In line 9, "calculate" should be --calculates--.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 13-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are drawn to the apparatus of a positioning terminal, but then recite a method step: "the positioning terminal calculate[s]  $TT=TR-|P-Q|/c$ ;" in line 9. According to the United States Court of Appeals for the Federal Circuit in *IPLX Holdings, L.L.C. v. Amazon.com, Inc.* 05-1009 (<http://www.fedcir.gov/opinions/05-1009.pdf>): "Because [the] claim [] recites both a system and the method for using that system, it does not apprise a person of ordinary skill in the art of its scope, and it is invalid under section 112, paragraph 2." (p. 13). In this case, the apparatus is being used to calculate TT. The examiner suggests language along the lines of the way applicant handles claim language for a calculation in claim 1, starting in line 14 (e.g. "a control device for calculating  $TT=TR-|P-Q|/c$ ").

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 3662

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-6, 8-11, 13-17, and 19-22 are rejected under 35 U.S.C. 102(b) as being anticipated by King, previously cited.

In regard to claims 1-6, 8-11, 13-16, and 19-21, King discloses:

a plurality of first signal sources (GPS satellites) each emitting a respective first signal, and one or more second signal sources (BSs) each emitting a respective second signal, the first signals being synchronous with a reference time and the second signals being non-synchronous with the first signals, for, based on a signal propagation time and signal propagation speed of the first signals, determining a distance from the positioning terminal to the first signal sources so as to determine a position of the positioning terminal, said positioning system comprising:

a measurement device (MS) for receiving the first signals from the first signal sources to determine the position a P of the measurement device and a time of measurement when the measurement device receives the first signals and for, based on the time of measurement, measuring a receiving time (TR) of a predetermined event of the second signals (col. 2, line 49 to col. 3, line 61);

a control device for determining a signal propagation time (t) between the measurement device and one of the second signal sources by calculating a relative distance  $|P-Q|$  between the measurement device and the one second signal source

Art Unit: 3662

based on the position P measured by the measurement device and a position Q of the one second signal source and by dividing the resulting distance by the signal propagation speed, and for determining a time (TT) at which the one second signal source originates the predetermined event by solving  $TR-t$  (col. 3, lines 11-16);

the positioning terminal having a receiving device for receiving the signals from the first and second signal sources (col. 1, line 66 to col. 2, line 2; col. 8, lines 55-56); and

a communication device for communicating between the control device and the positioning terminal (col. 2, lines 3-11),

wherein the positioning terminal uses the time TT as a reference to receive the signals from the first signal sources for positioning (col. 1, line 66 to col. 2, line 2; col. 8, lines 55-56).

In regard to claims 17 and 22, King further discloses the measurement device further comprises a mobile terminal in good conditions, where the position P of the measurement device can be determined without accurate time information and measures P and TR to voluntarily report the measured P and TR to the control device in the same mobile communication network (col. 8, lines 27-31).

Art Unit: 3662

6. Claims 1-6, 8-11, 13-16, 18-21, and 23 are rejected under 35 U.S.C. 102(e) and 102(a) as being anticipated by Krasner.

In regard to claims 1-6, 8-11, 13-16, and 19-21, Krasner discloses:

a plurality of first signal sources (GPS satellites) each emitting a respective first signal, and one or more second signal sources (BSs) each emitting a respective second signal, the first signals being synchronous with a reference time and the second signals being non-synchronous with the first signals, for, based on a signal propagation time and signal propagation speed of the first signals, determining a distance from the positioning terminal to the first signal sources so as to determine a position of the positioning terminal, said positioning system comprising:

a measurement device (MS) for receiving the first signals from the first signal sources to determine the position a P of the measurement device and a time of measurement when the measurement device receives the first signals and for, based on the time of measurement, measuring a receiving time (TR) of a predetermined event of the second signals (col. 7, line 34 to col. 7, line 7);

a control device for determining a signal propagation time (t) between the measurement device and one of the second signal sources by calculating a relative distance  $|P-Q|$  between the measurement device and the one second signal source based on the position P measured by the measurement device and a position Q of the one second signal source and by dividing the resulting distance by the signal propagation speed, and for determining a time (TT) at which the one second signal source originates the predetermined event by solving  $TR-t$  (col. 3, lines 11-16);

Art Unit: 3662

the positioning terminal having a receiving device for receiving the signals from the first and second signal sources (col. 1, line 66 to col. 2, line 2; col. 8, lines 55-56); and

a communication device for communicating between the control device and the positioning terminal (col. 2, lines 3-11),

wherein the positioning terminal uses the time TT as a reference to receive the signals from the first signal sources for positioning (col. 1, line 66 to col. 2, line 2; col. 8, lines 55-56).

In regards to claims 18 and 23, Krasner further discloses the measurement device further comprises a mobile terminal in good conditions, where the position P of the measurement device can be determined without accurate time information and measures P and TR according to a request from the control device in the same mobile communication network report the measured P and TR to the control device in the same mobile communication network (col. 7, lines 37-40).

7. Claims 1-6, 8-11, 13-16, and 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Soliman '739.

Soliman '739 discloses:

a plurality of first signal sources (GPS satellites) each emitting a respective first signal, and one or more second signal sources (BSs) each emitting a respective second signal, the first signals being synchronous with a reference time and the second signals being non-synchronous with the first signals, for, based on a signal propagation time

Art Unit: 3662

and signal propagation speed of the first signals, determining a distance from the positioning terminal to the first signal sources so as to determine a position of the positioning terminal, said positioning system comprising:

a measurement device (MS) for receiving the first signals from the first signal sources to determine the position a P of the measurement device and a time of measurement when the measurement device receives the first signals and for, based on the time of measurement, measuring a receiving time (TR) of a predetermined event of the second signals (col. 21, line 48 to col. 22, line 32);

a control device for determining a signal propagation time (t) between the measurement device and one of the second signal sources by calculating a relative distance  $|P-Q|$  between the measurement device and the one second signal source based on the position P measured by the measurement device and a position Q of the one second signal source and by dividing the resulting distance by the signal propagation speed, and for determining a time (TT) at which the one second signal source originates the predetermined event by solving  $TR-t$  (col. 22, lines 10-32);

the positioning terminal having a receiving device for receiving the signals from the first and second signal sources (col. 2, lines 28-47); and

a communication device for communicating between the control device and the positioning terminal (col. 2, lines 3-11),

wherein the positioning terminal uses the time TT as a reference to receive the signals from the first signal sources for positioning (col. 21, lines 62-64).

Art Unit: 3662

8. Claims 1-6, 8-11, 13-16, and 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Nir.

Nir discloses:

a plurality of first signal sources (GPS satellites) each emitting a respective first signal, and one or more second signal sources (BSs) each emitting a respective second signal, the first signals being synchronous with a reference time and the second signals being non-synchronous with the first signals, for, based on a signal propagation time and signal propagation speed of the first signals, determining a distance from the positioning terminal to the first signal sources so as to determine a position of the positioning terminal, said positioning system comprising:

a measurement device (MS) for receiving the first signals from the first signal sources to determine the position  $P$  of the measurement device and a time of measurement when the measurement device receives the first signals and for, based on the time of measurement, measuring a receiving time ( $TR$ ) of a predetermined event of the second signals (col. 7, lines 31-60);

a control device for determining a signal propagation time ( $t$ ) between the measurement device and one of the second signal sources by calculating a relative distance  $|P-Q|$  between the measurement device and the one second signal source based on the position  $P$  measured by the measurement device and a position  $Q$  of the one second signal source and by dividing the resulting distance by the signal propagation speed, and for determining a time ( $TT$ ) at which the one second signal source originates the predetermined event by solving  $TR-t$  (col. 7, lines 31-60);

Art Unit: 3662

the positioning terminal having a receiving device for receiving the signals from the first and second signal sources (col. 9, lines 3-13); and

a communication device for communicating between the control device and the positioning terminal (col. 7, lines 43-47),

wherein the positioning terminal uses the time TT as a reference to receive the signals from the first signal sources for positioning (col. 9, lines 3-13).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 18 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over King.

King fails to disclose the measurement device sending the results in response to a request. However, it is known that the amount of communication traffic from customers varies in mobile communication systems. It would have been obvious to, at time of high customer traffic, to disable the simultaneous/automatic transmission of results until consumer traffic dropped down to a level where extra bandwidth was available, and then request that the result transmission continue.

Art Unit: 3662

10. Claims 7, 12, and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over any one of King, Krasner, Soliman '739, and Nir, and in further view of Vannucci.

King/Krasner fails to disclose television broadcast stations as the second signal sources.

Vannucci discloses using television broadcast stations as secondary signal sources to be used with GPS satellites for positioning (¶6, 95).

It would have been obvious to use the known television broadcast station secondary signal sources of Vannucci as positioning transmitters for areas where the number of visible GPS satellites plus BSs are not sufficient for a position calculation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fred H. Mull whose telephone number is 571-272-6975. The examiner can normally be reached on M-F 9:00 - 5:00.

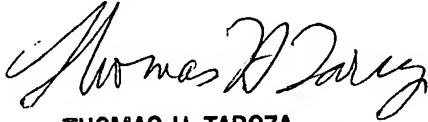

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas H. Tarcza can be reached on 571-272-6979. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3662

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
